

Events Are Changes in the State Minimum Wage

Outcome DGP: Empirical

Dependent Variable is the 10th percentile of wages earned by men 18–25, calculated from the CPS, and the unit of observation is a state–year. An event should be interpreted as a 1 dollar increase in the state minimum wage. Multiple Dummies coefficients are adjusted so that the coefficient for event time zero equals zero. Regression controls for state and year fixed effects, state population, GSP per capita, and the state unemployment rate.
