

This should (Perhaps) be meaningful

This definitely should not

Top graph: Pre-event dummies drawn from a random normal, mean 0 and SD 20. Time zero drawn from a normal(40,20), and post-event times are equal to the previous period coefficient plus an increase drawn from a normal(10,10). Confidence Interval equal to $\pm .9$ of the largest draw.

Bottom Graph: Same points, same confidence interval, sorted randomly.
